

# Sustainability policy

By choosing innovative solutions and ways of working we will strive to reduce the use of resources and impact on our surroundings when building, renovating and operating pharmaceutical facilities to the benefit of people, planet and production.

We will always present alternative and more sustainable solutions to meet our clients' needs and in this way set standards for sustainability in the pharmaceutical sector. We will be able to describe and document the impact of a proposed solution to our clients.

Our approach to any given challenge or project are a sustainable professional mindset emerging from sharing of new ideas and solutions with clients and colleagues.

This means that we continuously strive to integrate environmental, health and safety considerations into our services and business processes, as well as we ensure that the principles of sustainable behavior, operations and choice of solutions are also an integral part of the day-to-day operations of NNE as a company.

We will comply with environmental legislation, regulatory requirements and other regulations that NNE has agreed to follow.

This policy is implemented in a range of global goals. The goals are revised and approved by the executive committee on an annual basis, available on our intranet and published in the annual Communication on Progress (COP) report available on the NNE website.
